Quiz 2.5

[Bookmark this page](#)

Problem 1

1/1 point (graded)

Given the following JavaScript, what would be printed to the console?

```
var message = 'The quick brown fox jumped.';
console.log(message.search('fox'));
console.log(message.search('dog'));
```

☐ true and false

☐ 0 and -1

☒ 16 and -1 ✔

☐ 'fox' and null

Answer
Correct:
The `search` function determines whether the argument can be found within the string. If so, it returns the index at which the argument starts; if not, it returns `-1`.

Problem 2

1/1 point (graded)

Given a string variable named `str` with value `'abc1'`, which of the following will return true?

☒ `/[a-z][a-z0-9][0-9]/.test(str)` ✔

☐ `/[0-9][a-z]/.test(str)`

☐ `/[0-9][a-z0-9]/.test(str)`

☐ `/[a-z][0-9][a-z0-9]/.test(str)`

Answer
Correct:
This regular expression means “a lowercase letter; followed by a lowercase letter or digit; followed by a digit,” which matches “bc1” at the end of the string. None of the other regular expression patterns match this string.
